CampusKit

GOOD TO GO.

Team contract

DRAFT - UNSIGNED. Complete and agree together before signing.

COMP229 - Web Application Development
Project Part 1 | Proposed team name: CampusKit
Project: Campus equipment lending application

Communication and delivery

1. Attend the agreed weekly meeting and notify the team in advance if unavailable. Meeting time, location/channel: [Required].

2. Check the agreed team channel on weekdays and respond within 24 hours. Channel: [Required]. Raise blockers promptly rather than waiting for a deadline.

3. Break work into board tasks with an owner, acceptance criteria, and due date. Keep status accurate and flag delivery risk at least 48 hours before the internal deadline when possible.

4. Commit your own work under your own GitHub identity. Use feature branches, review code together, and never commit credentials. Every member must contribute genuine programming work.

5. Test assigned functionality, document API changes, and explain the design to teammates. Every member must be able to discuss the full development process.

6. Set an internal review deadline at least 48 hours before the course deadline. Exact internal deadline: [Required].

7. Communicate respectfully, listen to technical concerns, and resolve disagreements using requirements and evidence. Use a majority team decision for ordinary choices after discussion; escalate unresolved issues to the professor.

8. Acknowledge external sources and assistance according to course rules. Never fabricate commits, test results, signatures, identities, or task-board progress.

Missed commitments and conflicts

For a first missed commitment, discuss the cause and agree on a recovery task and deadline. Record the agreement on the board. Repeated or material non-participation requires a documented team discussion and written notice to the member with an opportunity to respond. If unresolved, present factual records to the professor and request guidance. The course instructions allow an unproductive flag and a zero grade for affected releases until the flag is removed; grading and flag decisions remain with the professor. Team members do not unilaterally impose grades.

Membership stays fixed for the project. A requested move because of irreconcilable conflict needs the professor's approval and updated contracts for both affected teams.

CampusKit

GOOD TO GO.

Team agreement and signatures

Fill 4-6 member rows. Each person remains a programmer and must understand the full application. Use actual student information and signatures.

By signing this completed contract, each member accepts the agreed responsibilities, communication expectations and escalation process. Any professor-approved membership change requires updated contracts.

Member 1

Full name: _____ Student ID: _____

Role / agreed work: _____

Signature: _____ Date: _____

Member 2

Full name: _____ Student ID: _____

Role / agreed work: _____

Signature: _____ Date: _____

Member 3
